1. Do not skate on an ice thickness of less than 20 cm!

2. Do not rely on the weight of a bottle to determine the ice thickness.

3. Be aware of potential holes in the ice.

4. If you suspect an ice weakness, move away from it immediately.

5. If you fall through the ice, try to stay calm and call for help.

6. Use a rescue sled to pull yourself to safety.
